

Undersuit Flex 190 Ladies First

The undersuit was tested in different conditions: starting from the long dives with the use of heating system, short dives to underwater works. In the first as well as in the second situation the undersuit was perfectly adapted. Its first and major advantage is the extreme flexibility (usually I dive in BZ 400 and heating system). It is ideal supplement of the E.Motion drysuit – comfort and flexibility – incomparable with any other undersuit available on the market.

Even when working in difficult conditions, associated with huge physical encumbrance (thus the intense sweating) the undersuit insulated the water (sweat) from the body. Thanks to its thickness it dries very quickly allowing to stay dry during subsequent dives. Wearing the undersuit can be compared to wearing a very comfortable fleece. Maintaining a good thermal conditions is not a problem. In case of waters with lower temperature or during the dives requiring longer presence underwater, the heating system is recommended.

Why I would recommend the Flex 190...

For its uncompromising convenience and comfort, none of the undersuits available on the market meets the requirements as Flex 190 does.

It is the only available undersuit with so advanced technology.

It is created for diver by diver.

It is created for women who wants to feel feminine also during diving.
