

PROPER MAINTENANCE OF **TIZIP** ZIPPER FOR DIVING DRYSUITS

Washing

- Always rinse the zipper with fresh water after dive (shower, bottled water etc.) on the dive site, boat or straight after returning home after dives. A little soapy water is also recommended. Do not use strong detergents.
- Wash the zipper from outside, on the sides and inside along the zipper
- Clean zipper with soft toothbrush outside, on the side and inside along the zipper

Drying

- Dry with water absorbing cloth, towel and then a hair dryer (if possible)
- While using hair dryer remember to do it from a distance using cold air blow
- Dry every gap including under pleat (cover zipper)

Storage

- Use wide hanger to hang the drysuit
- Leave the dry zipper open while drying and storage. You can close the cover zipper
- Store hanged in: room temperature, low humidity, dark room with no sun light.
- Avoid storing in a closed, humid box or drysuit bag

Lubricate

- Use a lubricant recommended by the manufacturer. Do not use any other substance or grease.
- Use lubricant every time before the dive when suit is dry. Do not apply it for storage. Dirt can stick to it.
- Apply lubricant only at docking end: outside, on the sides and inside. Do not apply it on the zipper teeth.

Failure to follow the instructions may cause zipper damage and will void the warranty.
