

CLIENT DECLARATION

REGARDING THE WAIVER OF THE INITIAL DRYSUIT LEAK TEST

™ SANTI | GROUP

Client details

Full name / Company :

Drysuit details

Brand / Model : _____

Serial number : _____

Date of submission of the drysuit : _____

1. Waiver of the initial leak test

I have been informed that, prior to carrying out the repair or replacement of the components specified by me, it is recommended to perform a full leak test of the drysuit. Such a test allows the overall technical condition of the drysuit to be assessed and any leaks or other issues that may not be visible during a standard visual inspection to be detected.

I consciously waive the performance of the initial full leak test prior to commencement of the requested service work.

I understand that, due to my waiver of this test, the service centre is unable to determine or confirm the leak-tightness of the entire drysuit prior to carrying out the requested repair or component replacement.

2. Condition of the drysuit after the requested service

I acknowledge that the replacement or repair of an individual component does not constitute confirmation of the full functionality, leak-tightness, or good technical condition of the entire drysuit.

In particular, I acknowledge that, following completion of the requested service and a subsequent leak test, leaks or other defects that existed previously and are unrelated to the replaced or repaired component may be discovered.

This applies in particular to used or older drysuits, as well as drysuits manufactured by other manufacturers, where their construction, materials, workmanship, or previous repairs may affect their current technical condition.

3. Possibility of additional costs

If, following completion of the requested service or during a subsequent leak test, additional leaks or defects are identified that were not covered by the original service order, their repair may require additional service work and result in additional costs.

I acknowledge that, if a significant number of leaks or poor technical condition of the drysuit is identified, further repair may prove uneconomical, technically impossible, or may involve costs disproportionate to the value of the drysuit.

In such a case, the service centre will inform me of the identified technical condition and, where possible, present a proposal for further action.

4. Responsibility for the scope of the service order

I understand that the service centre performs work in accordance with the scope specified in the service form and is not responsible for defects, leaks, or wear of other components of the drysuit that were not included in the service order and existed prior to the drysuit being submitted to the service centre.

I consciously commission the work specified in the service form without first having a full leak test of the drysuit performed and accept the resulting limitations regarding the assessment of its overall technical condition.

Place and date : _____

Client's legible signature : _____

Signature of the employee accepting the drysuit : _____
